ONLINE SMARTPHONE TRADING PORTAL SYSTEM.
FEATURES:

1. Phone Valuation System

1.1. User can register a phone by entering details (brand, model, release year, storage, battery health).

1.2. User can select the phone's condition from predefined options (Excellent, Good, Fair, Poor).

1.3. System automatically calculates an estimated price based on the model's base price, release year depreciation, and condition multiplier.

1.4. User can update the phone's condition to trigger a re-evaluation of the estimated price.

1.5. User can view all phones they have registered along with their current estimated prices.

2. Marketplace Discovery System

2.1. User can list their registered phone on the marketplace for others to see.

2.2. User can browse all active marketplace listings with details (brand, model, year, condition, estimated price, owner).

2.3. User can search listings by brand or model name.

2.4. User can filter listings by condition, price range, or release year.

2.5. User can compare their phone's estimated price against a listed phone to see the cash difference.

3. Trade Negotiation System

3.1. User can send a trade request by selecting their phone and a target phone from the marketplace.

3.2. System automatically calculates the cash difference between the two phones' estimated prices.

3.3. User can view all trade requests they have sent, along with their current status (Pending, Accepted, Rejected).

3.4. User can view all incoming trade requests on their listed phones.

3.5. User can cancel a pending trade request they have sent.

4. Trade Execution System

ONLINE SMARTPHONE TRADING PORTAL SYSTEM.
FEATURES:

4.1. Phone owner can accept or reject an incoming trade request.

4.2. Upon acceptance, ownership of both phones is transferred in the system.

4.3. Both phones' statuses are updated to Traded and their marketplace listings are closed.

4.4. A transaction record is created storing the trade details, cash difference, and date.

4.5. User can view their full transaction history including phones traded and cash paid or received.

5. User Trust & Rating System

5.1. User can register an account with a secure User ID assigned by the Admin.

5.2. User can log in and view or edit their profile details.

5.3. After a completed trade, both users can leave a rating (1–5) and written comment for each other.

5.4. User can view ratings and reviews left on their profile by other traders.

5.5. System displays an average rating score on each user's profile based on all received reviews.

6. Admin Monitoring & Control System

6.1. Admin can view and manage all registered user accounts.

6.2. Admin can remove fake or inactive marketplace listings.

6.3. Admin can update the base price of any phone model, which affects future price estimations.

6.4. Admin can view all ongoing and completed trades across the platform.

6.5. Admin can generate basic platform reports such as total users, total trades, and most listed brands.
